EAGLE CORR PE (DUAL WALL) ROUNDS OUT THE JM EAGLE LINE

JM Eagle is expanding the range of its product line even further with the introduction of its first corrugated polyethylene pipe, Eagle Corr PE (Dual Wall), now in production at its Wharton, Texas, plant.

Slated to hit the ground June 1, the new Eagle Corr PE goes head to head with competing products, offering a better watertight configuration, dual gasket technology and a more durable joint. It also rounds out JM Eagle's offerings, making it the only manufacturer offering the full spectrum of pipe for all construction needs.

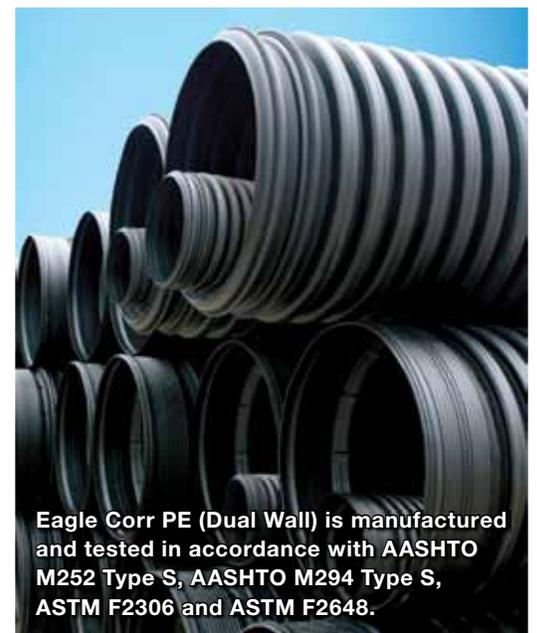

"A customer can now order PVC for one application and PE for another and get it in one call and on the same truck," says Dan O'Connor, JM Eagle vice president of sales for PE. "It's an industry first!"

Eagle Corr PE (Dual Wall) combines a corrugated exterior and a smooth interior for maximum hydraulic efficiency in a high-density polyethylene pipe. It can be used in a variety of gravity flow applications and is especially ideal for storm sewer systems. JM Eagle will begin production of Eagle Corr PE (Single Wall) in the summer.

The product has a high strength-to-weight ratio, is very flexible and weighs less than traditional products, making it easier to install without sacrificing durability or structural strength. Designed for use in engineered construction, its applications extend from commercial and residential to recreational, irrigation/agricultural and capital improvement projects.

Eagle Corr PE (Dual Wall) can support an H-25 load—with a minimum cover of only 1 foot—but has a flexible conduit design that allows for cover heights in excess of 100 feet. Additionally, it has a watertight bell-and-spigot joint and, like all of JM Eagle's polyethylene pipe products, it provides unmatched resistance to corrosion, abrasion and UV degradation. It will be available in 4- to 60-inch diameters and lengths of 20 feet.

"This is no me-too product," says O'Connor. "JM Eagle has applied a tremendous amount of research and development to an innovative pipe that is superior to the competitions'. Couple that with the one-truck PVC-PE shipments, and this offering is truly unique."

Eagle Corr PE (Dual Wall) is manufactured and tested in accordance with AASHTO M252 Type S, AASHTO M294 Type S, ASTM F2306 and ASTM F2648.
