STORY IN WATERWORLD SPREADS JM EAGLE WORD

JM Eagle products are getting more and more national press lately, most recently with the feature story “District Puts Plastic Pipe to the Test,” which ran in the November issue of WaterWorld magazine.

The feature expands on a Customer Connection story JM Eagle distributed in October. It describes Water District One’s stringent in-the-field testing of Ultra Blue C909 and, later, Eagle Loc 900 before putting them in the ground. From hitting them with a backhoe to trying to pull them apart with trucks, the construction team at this district alleviated any doubts these pipes could do the job.

To view the whole story, [click here](#).

Ultra Blue C909

- Molecularly oriented for wall thickness half that of conventional pipe.
- Meets 7,100 psi HDB vs. 4,000 psi HDB of conventional pipe.
- Lightweight and easy to handle.
- Four times the strength of conventional pipe.

Eagle Loc 900

- JM Eagle’s C900 pipe with internal joint restraint.
- Open-trench and trenchless applications.
- Eliminates restraint’s exposure to corrosion.
- Simplifies installation and reduces labor costs.
