## EAGLE LOC 900 NOW AVAILABLE NATIONWIDE

JM Eagle's Eagle Loc 900 internal joint restraint system is now available for broader distribution coast to coast.

Now being manufactured at JM Eagle's plants in Wharton, Texas; Wilton, Iowa; Adel, Ga.; and Fontana, Calif., Eagle Loc 900's production is spreading to meet the strong demand. It began production at the Wharton plant in early 2009 and has since been the material of choice in thousands of infrastructure installations across the country.

"More and more municipalities are turning to Eagle Loc 900 as a cost-effective long-lasting solution to building and rebuilding their water systems," says Jeffrey Lee, JM Eagle western regional manager for waterworks. "Bringing production to four plants across the country helps meet the demand for this exceptional product."

Eagle Loc 900 pairs JM Eagle C900 with Bulldog technology that restrains the joint from the inside of the pipe, eliminating the need for tools, rods, clamps bolts or splines used in external restraints and reducing labor costs as much as 30 times over. It does away with concerns associated with external restraints and thrust blocks, including corrosion, intrusion with existing infrastructure and complications with future digs.

Eagle Loc 900 is suitable for installations including open trench, road bore and horizontal directional drilling. In HDD, it allows for placement in areas with high water tables and in hard-to-fit areas, it minimizes labor-intensive and expensive digging

and trenching, and it eliminates the need to pre-fuse the entire length of pipe.

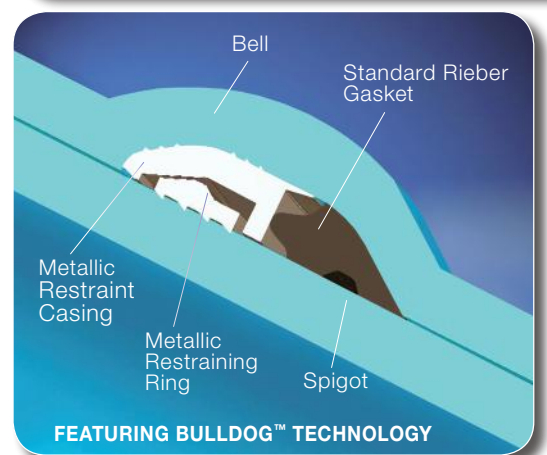

JM Eagle backs Eagle Loc 900 with its revolutionary 50-year warranty, which covers the company's high-performance PVC and HDPE pipe used in water transmission lines, as well as forced sewer mains. This includes its C900, C905 and C909 PVC products and C901/906 PE products.\*

In addition, Eagle Loc 900 is available for fast shipment on JM Eagle's Express Service Trucks from the Wharton, Adel and Fontana plants.

"Eagle Loc 900 delivers low labor costs and high performance," says Lee. "The new production at the four plants will ensure that cities in all corners of the United States can enjoy this revolutionary system."

- Restraints with unmatched hold.
- Eliminates need for tools, rods, clamps, bolts and splines.
- Slashes labor costs.
- Prevents corrosion.
