EAGLE LOC PRODUCT LINE EXPANDS AGAIN

JM Eagle's Eagle Loc line of internal joint restraint systems is growing further, with much-anticipated releases of Eagle Loc technology in 14-, 16- and 24-inch diameters for C905 pipe, as well as Eagle Loc IPS.

Previously announced last Spring, Eagle Loc IPS SDR 21 in a 200 psi pressure class will be in production as soon as late October in 4- and 8-inch diameters from JM Eagle's Wharton, Texas, plant, and in 4- and 6-inch diameters from the company's Wilton, Iowa, plant. Eagle Loc IPS SDR 21 serves rural water systems.

An industry first, Eagle Loc in expanded diameters offers the proven benefits of Eagle Loc 900 larger-scale potable-water distribution, as well as gravity sewer, force main and water reclamation projects.

NEW AT JM EAGLE:

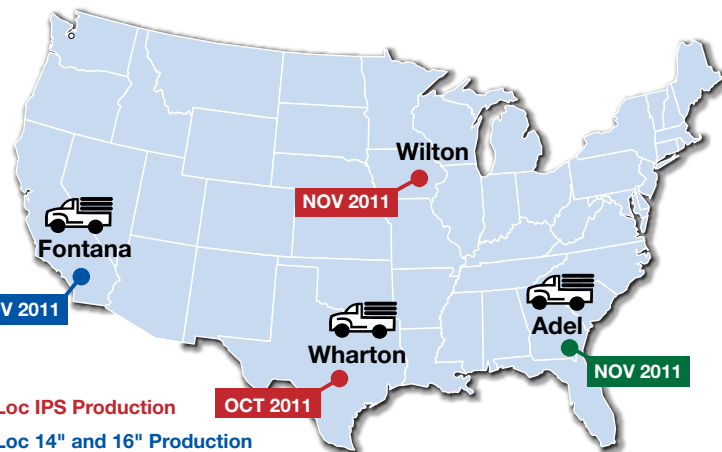

- 14", 16" and 24" Eagle Loc for C905
- 4", 6" and 8" Eagle Loc IPS

JM Eagle also expands its Eagle Loc offerings with 14-inch diameters, available in the beginning of November, and 16-inch diameters, available in mid November.

"The industry has been anxiously awaiting these expansions to the Eagle Loc line of products so this unbeatable technology can be enjoyed in even more applications," says Robert Wang, JM Eagle eastern regional manager for waterworks. "Now municipalities have an even wider range of excellent choices from JM Eagle in rebuilding their water systems.

Both will have pressure ratings of 165 psi (DR 25) and 235 psi (DR 18) and will be produced at the company's Fontana, Calif., plant. The 24-inch-diameter Eagle Loc DR 32.5 with a pressure rating of 125 will be available at the end of November from JM Eagle's Adel, Ga., plant.

As with all of its AWWA C900 and C905 products, JM Eagle will back the new diameters of Eagle Loc products with its revolutionary 50-year warranty.* In addition, Eagle Loc products are available for fast shipment on JM Eagle's Express Service Trucks from the Wharton, Adel and Fontana plants.
